SPEED Manual Chain Hoists

T2 Series - 0.5 to 50 ton Standard Capacity

SPEED T2 incorporates state-of-the-art design and technology to provide superior performance. Lighter and more compact than others in its class, yet highly efficient, this hoist spares nothing when it comes to lifting power.

With capacities from 0.5t to 50t, the T2 shines in a wide range of lifting applications.

Helping to set this hoist apart is the use of **SPEED**'s smallest yet strongest load chain.

This load chain has a breaking strength of 1,000N/mm² (100kgf/mm²).

SPEED's exclusive process technology and years of experience assure superior quality and performance.

With its impressive array of features and benefits, we are confident the T2 will meet your most demanding needs.

- All **SPEED** T2 Chain Pulley Blocks are tested to 150% of rated capacity
- All **SPEED** Hooks have a safety factor 5:1

Best Design
Highest Efficiency
and Reliability
SPEED T2

Outstanding features

A high-strength load chain and a dry-type braking mechanism combine with a highly - efficient compact design to provide smooth and reliable operation and outstanding performance

SPEED T2

F e a t u r e s

10 Important Features Of "SPEED" T2" Chain Hoist

1 Gear Case and Hand Wheel Cover are Resistant to External Shocks

Both sides of the hoist are covered with a thick steel gear case and reinforced wheel cover. Manufactured using state-of-the-art technology, these critical components are ideally shaped and highly rigid to maintain bearing alignment and withstand external shock

2 Double Enclosures Protect Against Rainwater and Dust Intrusion

The braking mechanism, comprising the heart of the hoist, is securely enclosed within the wheel and brake covers. This double coverage protects the internal mechanisms from intrusion by weather elements, mud and dust. Further, the hand chain guide attached to the wheel cover provides durability and a smooth operation of the hand chain on the hand chain wheel.

3 Double Pawl Spring Mechanism Increases Safety and Reliability

The T2 insists on two pawl springs to deliver an extra degree of performance in case one spring is damaged.

4 Sure and Reliable Mechanical Brake

SPEED's dry-type asbestos-free mechanical brake ensures outstanding stopping power and safety for high performance operation.

5 Hooks for Easy Work

Heat-treated to withstand the rigors of the toughest jobs, the T2's top and bottom hooks are ready to make your work easier. The bottom hook's relatively large dimensions enable a load to be quickly stabilized in the proper position while the bottom yoke's protecting guard protects the chain pin and nut from damage, further enhancing safety.

6 Bearing Mechanism Increases Mechanical Efficiency

SPEED's unique ball and needle bearings optimize mechanical efficiency and produce high power output with a minimum of manual input

7 Load Chain Guide Mechanism Smooths Operation

Superior performance is designed into the T2. Smooth load chain movement is facilitated by having a chain guide mechanism in the flanged load sheave and guide roller.

8 Highly Accurate and Durable Gears

Years of research and development have enabled SPEED to produce compact, highly efficient and durable gears.

9 Stopper Prevents Excessive Lowering

SPEED's carefully engineered stopper assembly not only prevents a load from being lowered too far, but even keeps the chain from exiting the mechanism. Increased pull force signals the operator the load has been lowered to the maximum extent.

10 Highly Strong Load Chain Load chains

the component comprising the heart of the chain hoist, are made of an exclusively developed, heat treated special steel alloy. Carefully selected special steel is entirely processed at SPEED's fully automated production facilities under the most stringent quality control. Thus, all of the SPEED chains are uniform in high breaking stress of 1000N/mm²(100kgf/mm²). They have excellent quality including toughness and resistance to wear and corrosion.

- Any lift of chain is available upon request.
- As **SPEED** Chains are heat treated, splicing of the load chain is prohibited. In case longer lifting is required, specify required lifting height when ordering.

■ Operating environmental conditions

Operating temperature range -40°C to +60°C	Operating humidity range Use the hoist at under 100%RH. This product cannot be used in water.	Materials Standard materials are used. Special materials such as sparkless materials and asbestos are not used. With regard to the environmental load substances, 6 substances defined in the RoHS directives are not contained in this product.

GEARED TYPE

•Shape of the Suspender for 3t is similar to the shape of the Suspender for 5t.

SMOOTH AND RELIABLE OPERATION

Mumpers & Buffers

SPEED's T2 Series Trolleys have bumpers, which fix trolley surely on the beam and guard against damage to a trolley and wheels arising from a collision with the stopper or between two trolleys. Buffers are available as option to install on the bumpers. Also, extended arms are available as option to install on the bumpers to help prevent damage to a hoist from collision from a hoist suspended on trolleys on the same beam.

Buffer is prepared as an option.

Accommodates a Wide Selection of Beam Widths

Trolleys are adjustable for various widths of both tapered and flat flanges by changing the adjustable spacers. They can also fit on beams of up to 305 mm flange width by replacing the suspension shaft, spacers and associated parts

•Figures in () are for GT005. •*: W20 and W30 mean 203 and 305mm flange width adjustability as option.

•In case of 7.5t and over capacity, trolley wheels for tapered flange are optional. Wheels for flat flanges are available as option. If you prefer wheels for flat flanges, please specify it in advance.

•In case of only straight I-beam, 0.5ton plain trolley can be used on 57mm and less width beam and 1ton plain trolley and geared trolley can be used on 73mm and less width beam and 2.5 & 3ton plain and geared trolley can be used on 89mm and less.

SPEED MANUAL CHAIN HOISTS

OPTIONAL EQUIPMENT

Overload Protection Device (OLL)

The hoist overload limiter protects the hoist mechanism from damage due to overloading. When an overload is applied to the hoist, the overload limiter actuates to stop lifting.

Corrosion Resistant Grade 80 Chain

We recommend chain hoists with Grade 80 chain when outstanding corrosion resistance is required. These chains are especially suited for use at work sites under the strong influences of rain and seawater, corrosive vapors and chemicals, etc.

Because Grade 80 chains are manufactured by applying a unique osmotic - diffusion treatment to special metals using SPEED's exclusive technology, they are extremely resistant to corrosion and are immune to peeling of the nickel - plating.

Please consult with your nearest SPEED distributor prior to purchase to ensure the correct Grade 80 chain selection as the corrosion resistance efficiency varies according to the environmental chemicals at the application work site.

Hoist with Extended Hand Wheel Shaft

When work site conditions necessitate operating a hoist at a distance, the extended hand wheel shaft provides added convenience. The standard length of the extended shaft is 1m.

Trolley for Small Radius Curved Beams

Small radius curve trolley operation is available upon request by removal of the protective lug. Please consult with your nearest SPEED distributor for details.

Rated Load (W.L.L.) (t)	Std. Flange width (mm)	Min. radius for Curve (mm)
0.5	74 to 127 (58 to 102)	450 (350)
1	74 to 127	450
2	82 to 153	550
2.5	90 to 153	650
3	90 to 153	650

Figures in parentheses show data for the plain trolley.

Spark Resistant Hoist

SPEED produces special spark-resistant chain hoists for use on work sites where spark protection is required. Please consult with your nearest SPEED distributor about the specific needs of your work site.

Chain Constrainer

In situations where the load chain on the no-load side is a hindrance when the load is raised, the load chain can be kept in a chain container attached to the chain hoist. Both steel and canvas chain container are available upon request.

Rail Clamp Device

A rail clamp prevents a manually-operated trolley from traveling by itself. Activated by manipulating a hand chain, the trolley rail clamp is convenient when fixing a trolley at a pre-set position, such as in a rolling and pitching ship or in a sloped tunnel.

Large Capacity Chain Hoist

Chain hoists with lifting capacities up to 100 tons are available upon request.

INFORMATION

High Speed CPB **Speedy lifting and lowering!** **Automatic high & low speed change!**

0.5t to 50 t

Stress-free 7:1 Lifting Speed!
High Speed KII is just released!

Succeeded in no-load high-speed operation
With originally developed automatic high/low-speed clutch technology,
SPEED has realized no-load seven times lifting speed.
This gear shows outstanding durability in continuous and
long-term use though it is small size.
Operability in a loaded condition is as high as the standard specifications.
Relieved from past stress, a worker can smoothly prepare for his field work.

Unique Industry Innovation!

Equipped with automatic speed change gear in no-load.
